ABSTRACT OF THE DISCLOSURE

A work vehicle provides improved visibility in front of the work vehicle. The work vehicle includes an engine arranged in the front of the vehicle and a cooling unit for the engine arranged elsewhere in the vehicle, such as behind the vehicle cab. When the work vehicle is a bulldozer, the aforesaid arrangement of engine, vehicle, and cooling module provides improved visibility in front of the work vehicle, so that the operator of the bulldozer can view the upper middle portion of the bulldozer blade.
